

**ZONIT**

**Z-PDS** 

**Optimized Power Distribution System**

Put the power to the rack back into your hands

**Z-PDS puts you in control at the rack.** Our Power Distribution System is the most reliable and flexible power delivery and distribution device for your data center. Z-PDS brings complete three-phase, A-B power redundancy into your rack, ensures optimal phase load balancing and allows for fast, easy power reconfigurations by your in-house technicians. The system eliminates the need to de-energize power panels or busways when making power configuration changes and increases reliability and uptime by reducing the domain of failure.

Z-PDS outputs a wide variety of three or single phase voltage power. A single Z-PDS can feed 1-6 racks depending on your power density needs. The system is compatible with all standard power distribution methods including traditional whips, busways and modular whips.

By putting you in charge of your power distribution build-out and on-going changes, Z-PDS saves you money on installation and maintenance.

DRIVING CUSTOMER SOLUTIONS

"I wish we knew about Z-PDS when we were designing our facility...it's modular functionality makes it a far more flexible alternative to our busway; It's easier to deploy, less cumbersome and less costly to change our power configuration. With Z-PDS we use half the breaker space to run whips, and use technicians instead of electricians to manage power. Saves us time and money!"

— Director of Datacenter Operations,  
Top 5 Medical Institution in the U.S.

**ZONIT**

**Solutions In, At & To the Rack**

Zonit is revolutionizing data center operations through state-of-the-art power management & control solutions in, at & to the rack. Simple solutions with patented technology to maximize system uptime, security, and flexibility – providing you with more control, less risk, and greater efficiency.

Our suite of products is focused on the rack, designed to meet the power management challenges of today's data centers and network closets.

**KEY FEATURES**

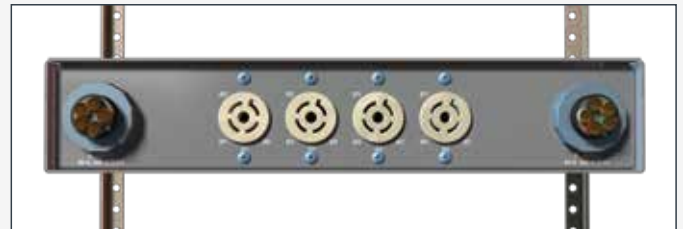

- Simplifies and streamlines power distribution, balancing and delivery
- Inexpensive to install and maintain and can easily be moved/redeployed using datacenter technicians - NOT electricians
- Compatible with all standard power distribution methods
- Supports “build as you go” methodology
- Industry leading 5-year warranty

**Z-PDS Models**

**Z-PDS Model - 60A 3Φ Wye A-B inputs, (4) L21-30R Outputs**
